Quote: "The P2P architecture represents a powerful communication technology with obvious social benefits."

What I expect to learn: What I expect to learn from this chapter is the definition and what is intellectual property all about..

Review: The chapter talks about intellectual property which is the more define way of having a property or a thing this intellectual property is used by many people today because many people are getting more smarter because of the modern world that we have today and because the there are many more technologies that are being invented and books are more advanced and kids have to learned in advanced even if they are in high school, preschool or grade school they have to learn all of this to be smart enough to have a knowledge on the new information technology that the world has today. Having a knowledge like this is big deal and the chapter talks about the legal and moral challenges in online file sharing this online file sharing is good because it is good to share a file online it is a automatic option than doing it manually because it takes a lot of time unlike online file sharing where you will just share a file from each other even though your far apart but these file sharing can be interrupted due to connection of the internet, or if there are hackers out there that wants to interrupt and hacked the thing that we are doing. As programmers and developers we have to learn on what to with these things because this is our specialty and this is the thing which we are good in and it Is not a bad thing at all we should cherish this and It is very important specially to teenagers like us.

What I have learned:

1. There are many students who are getting more smarter today because of the intelligent books they are using with good terms that they can learn something from.
2. Many people are getting more intelligent because of the more advanced technology we have today.
3. We have to careful in hackers, always.
4. We have to carefully analyze and know the system in order for us to know what to do if there is a problem.
5. We have to learn how to cherish what we have and learn from it.

Integrative Questions:

1. What is the relation of the chapter to ethics?
2. What is the issues that surrounds around the chapter?
3. What are the possible solutions to this problem from the chapter?
4. As a citizen of the country what can we contribute to this problem?
5. Are there any other ways for the people not to suffer too much on what Is happening.
