Quote: "Intercultural Information Ethics (IIE) can be defined in a narrow orin a broad sense."

What I expect to learn: What I expect to learn from this chapter is the definition of Intercultural Information Ethics and what it is all about.

Review: The chapter talks about the culture of information ethics and where it originated from studying the history of information ethics is important because knowing and understanding the meaning of information ethics will make us understand the heart and core of computer ethics more. Knowing this information ethics definition is important by knowing this we will be professionals and know the core and what is the relation of information ethics and computer ethics. And we will know why is it invented and why is it related each other. We will also know how or what is the relation of the word computer and information and how is it invented. Knowing all of these things will give us new ideas and knowledge in relation to our course and it is a good thing because there are many people who don't know that what they are doing is unethically wrong because they did not study what Is the good or bad in the internet or how to use it properly. That is why we have to teach them on how to use the internet properly to decrease the users of the internet who loves to do naughty things and uses the internet in a wrong and bad way. Doing all this things will not just help our self but the country too and the people around us it will make them realize what is good or wrong and by realizing that we should help them analyze and wrong what is good or bad in the usage of internet and how to use it wisely.

What I have learned:

1. History of information ethics is important.
2. After knowing its history it can now be related to computer ethics.
3. Relating and applying these things are very important.
4. We can now differentiate computer and information ethics.
5. We should help other people realize that what they are doing is wrong or right.

Integrative Questions:

1. Why do people use the internet in a bad way?
2. What are the benefits of the bad people who treats internet in a bad way?
3. How can we teach these people the right way to use the internet?
4. What is its relation to ethics or IT?
5. What are the possible solutions to the problem regarding this chapter's issue?
