

## Chapter 6: Digital Order

### Study Questions:

1. What is the difference between security and reliability? How are they related?  
Security is the one that a person need and a software and reliability is the assurance in something to make sure that thing will happen. Security and reliability are related because the security needs reliability and assurance that it is really secured.
2. If you own a personal computer, how secure is that machine? How did you decide how much security was enough?  
For my personal computer I will ensure that the computer has anti-virus and is always updated because reformatting a computer cost a lot and is really expensive for students like us.
3. If you use a computer system that is run by an organization have you ever carefully read the security policies that you are supposed to know as a systems user?  
When using a computer system from an organization we have to carefully ready the policies because we will be charged or will have an offence if we visited a site that is prohibited by that organization.
4. If your machine is being used as a drone by a hacker to send spam emails, are you victim, a perpetrator, or both?  
If this will happen I am a victim because that hacker is hacking my system and getting my systems information and files.
5. If you make a living by selling security software to individuals who own personal computers are you happy or sad when hacker activity increases?  
Of course I am happy when hacker activity increases because many people will buy more anti virus from me because they know that it is more safe and a computer really does need a anti virus from protecting the computer not only from virus but from threats.
6. Have you ever received an email that indicated someone else had sent out spam with your return email address on it? How would you feel about it?  
Yes I had received an email like this and after reading that the content is weird I understood immediately that it is a virus because I don't understand a thing on what the content says.
7. Have you ever compromised physical security for convenience? If so, what did you do? If not have you seen anyone else do this?  
Yes because we have to do something if our life is in danger because we have to secure and protect our selves from other people who have bad motives.
8. Why is the issue of children being exposed to pornography online a difficult one to resolve? Is this the only reason that received so much publicity?  
It is publicity because many people or children that are exposed to pornography are not influenced because of the pornography online but it is what they see from their parents and other people specially from poor people that is why many of them have many children because their children also knows how to do something that they had learned from their parents because they saw them doing it.

9. Do you think the 9/11 terrorist attack have substantially changed peoples attitudes toward the trade offs between privacy and security?

Yes because many people are know much more secure and protecting their selves and always at their place because they are scared that something might happen to them and they are more alert and warned than before because they don't know what will happen.

10. Go on the website and if you found something offensive. Having viewed this material that you find objectionable, would you favor legislation to ban this kind of material from the web?

I will favor this kind of ban because internet is where we also do business and seeing something like this is so unprofessional and unethical there are certain places for it should be done and I don't think internet is the right choice.
